

WHEN IT COMES TO COTTON

BOYCE CHARTERED ACCOUNTANTS CAN MAKE A REAL DIFFERENCE

Boyce has been working with cotton growers for 40 years

Boyce Chartered Accountants has been working with cotton growers from the time the industry first emerged in the Gwydir Valley of New South Wales. Forty years on sees us drawing on our experience, assisting growers in gearing up for their first crops of cotton in the Southern Valleys.

Boyce will add tangible value to your business whether you are a pioneer who is still in the game, or part of the next generation of growers coming through. We know and understand the issues that can arise across all stages of a cotton business – from start-up to maturity.

Our team can work with you to help market your crop, review the profitability of new technologies, analyse the economics of contractors versus owning your own plant, and manage taxation.

If you're looking to develop land for cotton we will help you understand the numbers and work through the potential tax outcome.

Boyce has produced the annual Australian Cotton Comparative Analysis (ACCA) since the mid 1980's. This study is widely regarded by the industry as the benchmark for the economics of cotton growing in Australia.

We are currently working with our partner – the Cotton Research and Development Corporation – to compile and analyse the results for the 2015/16 season. Interim results reveal an operating profit of \$2,291 per hectare – see overleaf for details.

Our team know the numbers and the timing of the operations that drive those numbers. We can advise you on what the best in the business do and how you can become part of this elite group of growers.

Boyce has the knowledge, insight and experience to make a real difference to your cotton business. So if your business is cotton, contact us.
